Jason drew a picture of the Santa Maria, the Pinta, and the Nina. His teacher told him it was very good, so he entered it in the school art contest. His picture won first prize. The first prize was two times more than the amount of money won for second prize. If second prize was \$17.00, how much did Jason win?

There are 14 pages about D-Day in Rose's book. There are some pages about D-Day in Connor's book, too. There are 26 pages about D-Day in all in the two books. Write an equation and solve it to find out how many pages about D-Day are in Connor's book.

Can you name the mystery three-digit number?

One of the digits is 3.

The second digit is 3 more than the first digit.

If you multiply the first and the last digits, the product is 9.

If you add the first and the second digits, the sum is 9.

Jenna took home some pictures she drew at school. She found tape to put the pictures on the wall in her room. Each picture needed four pieces of tape. She used 36 inches of tape. Wow! That's a lot of tape. How many pictures did she put up. Oh, wait. You don't have enough information. Each piece of tape was 3 inches.

Name: \_\_\_\_\_

	+	+	=	
	C	A	B	23
+	C	C	A	25
=	?	13	11	

**Equations and Hints:**

Each letter is a whole number.

Fill in the equations using the chart:

$$A + C = 13 \quad B + \underline{\quad} = 11 \quad \underline{\quad} + \underline{\quad} + \underline{\quad} = 23$$

$$\underline{\quad} + \underline{\quad} + \underline{\quad} = 25$$

Additional hints:

Each letter is less than 17.  $C = B + 2$   $C$  is the largest.

$A$  is the smallest.

**Show Work:**

**Solve:**

$$? = \underline{\quad}$$
