Sarah collects squishies. Before she started getting serious about collecting, she only had 7 of them. But now she has 33 squishies. She ordered 9 really big squishies online. They should be delivered next week on her birthday. And guess what? Next week on her birthday, she invited 6 friends over for a slumber party. In the invitation she said, "No gifts. Just give me 3 squishies."

On the day after her birthday, how many squishies will Sarah have?

Can you name the mystery three-digit number?

The second digit is 3 more than the first digit.

One of the digits is 3.

If you multiply the first and the last digits, the product is 18.

If you add the first and the second digits, the sum is 12.

You get the area of a rectangle by multiplying its length by its width. If its width is 2 feet and height is 7 feet, then the area is 2 feet x 7 feet = 14 feet squared. Emma drew a square. She does not know how to calculate its area, but she calculated the perimeter to be 12 feet. "I just added all the sides together to get the perimeter. How do I get its area?" she asks.

How would you respond?
