Name: _____

France, Switzerland, and South Korea were awarded gold (2, 4, and 8), silver (6, 7, and 2), and bronze (6, 2, and 5) medals. Figure out how many of each type of medals were won by each of the three countries.

For example, country x may have won 2 gold, 2 silver, and 2 bronze medals. However, if country x won 2 gold medals, that means country z did not win 2 gold medals. Instead, country z may have won 4 gold medals.

Use the clues to figure out the number of medals awarded to each country.

1. Switzerland won fewer bronze medals than silver medals. Switzerland also won more bronze medals than gold medals.
2. One country won an even number of bronze medals and two silver medals.
3. South Korea won either two or seven silver medals.
4. France won the fewest bronze medals.
5. France won a total of sixteen medals.
6. One country won seven silver medals. The same country also won seven gold medals.
7. Switzerland won two silver medals in cross-country skiing as well as three silver medals in snowboarding.
8. France won the most gold medals.

France won _____ gold medal(s), _____ silver medal(s), and _____ bronze medal(s).

Switzerland won _____ gold medal(s), _____ silver medal(s), and _____ bronze medal(s).

South Korea won _____ gold medal(s), _____ silver medal(s), and _____ bronze medal(s).
