What is the prime factorization of 9?

Name: \_\_\_\_\_

Jordan, Ashley, Lauren, and Natalie competed in the women's singles figure skating competition.

Each person has been assigned a technical and presentation ordinal mark. A mark of 1.0 indicated that the person was placed in first place. To determine the winner, the two marks from each judge are added together and assigned an ordinal. In case of a tie, the technical mark has more weight. If there is still a tie, we will allow both people to share the same rank. (Please note that these calculations are simplified from the actual Olympics.)

For the technical ordinal score, the judges give the best performance an ordinal of one. The next best performance receives an ordinal of two, and so on. The presentation ordinal score is assigned in the same way. So for four people, a person could have a presentation ordinal score ranging from 1 to 4.

(When ordinals are compared, a higher ordinal score actually means a lower number. For example an ordinal of 1 is better, and considered higher than an ordinal of 3.)

Figure out the scores for each skater and their final rankings.

1. Natalie's technical ordinal is equal to her presentation ordinal.
2. Jordan's technical ordinal score was higher than Lauren's technical ordinal score.
3. Ashley's technical ordinal score was higher than Lauren's and lower than Jordan's.
4. One skater received a 3 presentation ordinal and a 2 technical ordinal.
5. Lauren's technical ordinal is equal to her presentation ordinal.
6. Ashley did not have a presentation ordinal mark of 4.
7. Natalie had the best technical ordinal score.
8. One skater received a 1 presentation ordinal and a 1 technical ordinal.

Jordan received a score of \_\_\_\_\_. Jordan came in \_\_\_\_\_ place.

Ashley received a score of \_\_\_\_\_. Ashley came in \_\_\_\_\_ place.

Lauren received a score of \_\_\_\_\_. Lauren came in \_\_\_\_\_ place.

Natalie received a score of \_\_\_\_\_. Natalie came in \_\_\_\_\_ place.

True       False

Did you find that three are true? If not, look again!

Hint: If you see the same pieces on both sides, you might need to remove both pieces.

You should only mark TRUE if you are absolutely sure it is correct!

Draw 3 pictures in the correct order. Use each of the clues so you will know what to draw.

! Draw 1 of these 3 pictures.  
! The picture IS in the correct spot.

! Draw 1 of these 3 pictures.  
! The picture is NOT in the correct spot.

! Draw 1 of these 3 pictures.  
! The picture is NOT in the correct spot.

! Draw 2 of these 3 pictures.  
! The pictures to use are in the correct spot.

Draw the 3 pictures in the correct order:

Draw 4 pictures in the correct order. Use each of the clues so you will know what to draw.

! Draw 1 of these 4 pictures.  
! The picture is NOT in the correct spot.

! Draw 1 of these 4 pictures.  
! The picture IS in the correct spot.

! Draw 2 of these 4 pictures.  
! None of those pictures are in the correct spot.

! Draw 1 of these 4 pictures.  
! The picture IS in the correct spot.

! Draw 2 of these 4 pictures.  
! The pictures to use are in the correct spot.

! Draw 1 of these 4 pictures.  
! The picture IS in the correct spot.

Draw the 4 pictures in the correct order:

Name: \_\_\_\_\_

Can you draw ONE line going through ALL the circles? Your line can go left, right, up, or down. It cannot go diagonally. Your line cannot cross over any part of the line you have already drawn.

You MUST TURN in a BLACK circle. Do NOT TURN in a WHITE circle.

The puzzle on the left shows a correct line going through all the circles.

Finish the line:

Finish the line:

Emma and her little sister, Rosa, both have birthdays on the same day. Emma is fourteen years old. Rosa is nine years old. Did you know that Emma was once double the age of Rosa? How many years ago was that?

$48 \div 4 =$

$5 \times 4 =$

$12 \div 3 =$

$18 \div 2 =$
